## **INTRODUCTION**

**Bulletin 295B is a technical manual that provides descriptive and maintenance information for the Motor Units.**

The bulletin is made up of a group of appropriate independent sections. They are separately identified by title and section number. The pages of each section are numbered consecutively, independent of other sections.

The identifying number of a section, a 9-digit number, appears on each page of the section in the upper left corner of left-hand pages and the upper right corner on right-hand pages.

The sections are arranged as shown in the table of contents on a following page. They are in ascending numerical order except where this is contrary to a logical presentation of material.

To locate specific information proceed as follows:

- Find the involved equipment in the first column of the table of contents.
- Find the type of information in the second column.
- The correct 9-digit number can then be found in the third column.
- Turn to Page 1 of the section where its contents can be found.

April, 1968  
Change 2

## TABLE OF CONTENTS

### FILING INSTRUCTIONS

1. The following filing instructions apply to changes sent to the field.
2. Asterisks (\*) in the table of contents indicate changes.
3. When the issue of a section changes, replace the old issue with the attached new one.
4. In the case of addendums, turn to the affected section and follow the instructions on the first page of the attached addendum.
5. Replace the old table of contents with this new one.

#### 1. GENERAL

1.01 This section is reissued to include additional synchronous motor information, and to revise the section number appearing on each page. With the exception of the section number, which changed on every page, all other changes and/or additions are indicated by marginal arrows, or by arrows placed within the illustration or table.

1.02 The motor units that provide electro-mechanical rotating motion for operating various teletypewriter apparatus are of two basic types: synchronous and series (governed). Both types are self-contained motor units, with characteristics adaptable for use with standard power sources.

1.03 The synchronous type motor units (Figures 1 and 2) are available in miniature (25 millihorsepower), standard, and heavy duty ratings. These motor units must be operated from a standard, single-phase, regulated power source with specifications as listed in Tables I and II.

1.04 The series (governed) type motor units (Figure 3) are available in standard and heavy duty horsepower ratings and may be operated from regulated or unregulated, standard, single-phase power sources, or dc (direct current). The series (governed) type motor unit is also available for operation with 48 volts dc only. Specifications are given in Table III.

#### 2. DESCRIPTION

2.01 In general, the synchronous motor units consist of a motor and mounting arrangement, and the required starting and protective devices. Variations of this type are described below.

#### SYNCHRONOUS MOTOR UNITS

A. Miniature Synchronous Motor Units (Figure 1)

2.02 The 25 millihorsepower miniature synchronous motor units consist of a two-pole wound stator and two end shields that support a squirrel cage type rotor. The motor is secured to its bracket-type cradle by means of resilient mounts at each end, which tend to reduce the transmission of vibrations from the motor to the driven apparatus. A starting relay, capacitor and thermostatic cutout switch are mounted under the cradle. The thermostatic cutout switch protects the motor windings from excessive current drawn by the motor. It can be reset manually.

2.03 The variations of the miniature synchronous include 3600 rpm (60-cycle units) and 3000 rpm (50-cycle units) operation; an external fuse instead of the thermostatic cutout switch; single or dual air ducts to improve

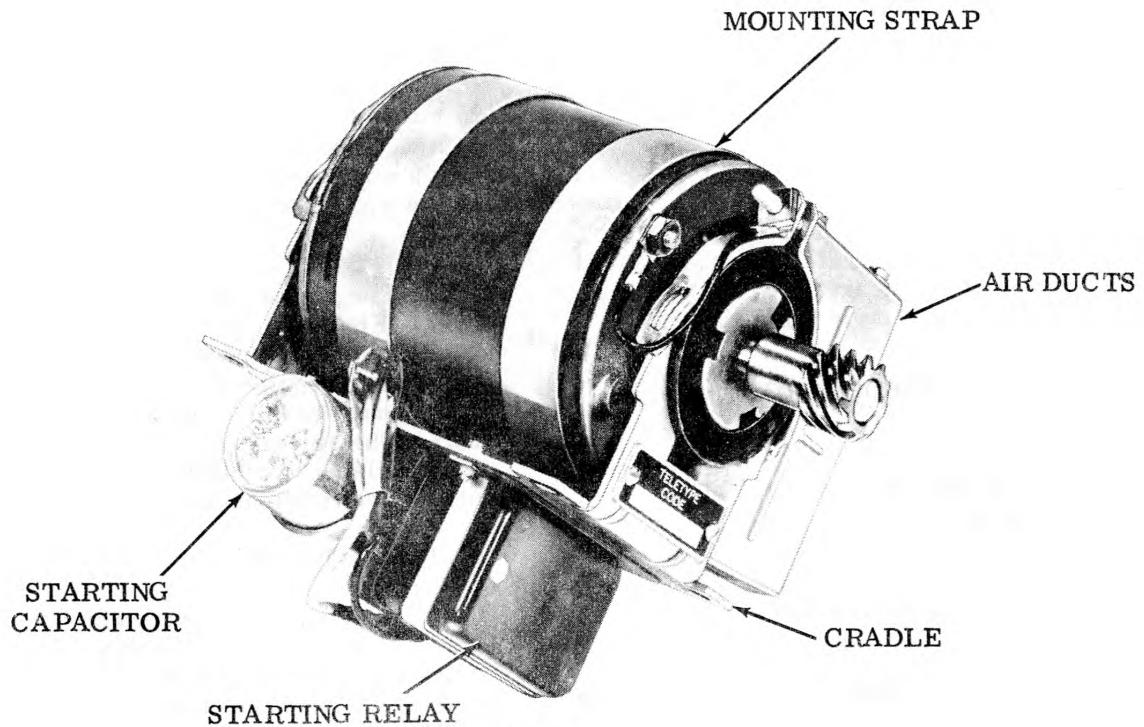

Figure 1 - Typical Miniature Synchronous Motor Unit

ventilation, or an air shield to isolate the incoming cool air from the outgoing heated air; and mounting of control parts on the side of the motor instead of under the cradle.

#### B. Standard and Heavy Duty Synchronous Motor Units (Figure 2)

**2.04** The standard and heavy duty synchronous motor units consist of a two pole wound stator and two end shields that support a ball bearing rotor. A combination hand wheel and fan is mounted on the motor shaft, and two fans are mounted at each end of the rotor within the end shields. The opposite end of the shaft contains a tapped hole for mounting the driving gear. A motor starting relay, starting capacitor, and thermostatic cutout switch are mounted in a compartment of the motor mounting bracket. The thermostatic cutout switch, which is reset manually, protects the motor windings

from excessive current drawn by the motor. The motor is supported by resilient mounts which are part of the end shields and which are held in place by straps attached to the mounting bracket. The resilient mounts tend to reduce the transmission of vibration from the motor to the driven associated apparatus.

**2.05** Variations of the standard and heavy duty synchronous motor units include: 3600 rpm (60 cycle units) and 3000 rpm (50 cycle units) operation; 1/20 and 1/12 horsepower ratings; replacement of the fan with a gear to reverse the direction of rotation for such applications as the high speed punch unit; inverted mounting for installation in the Wall Mounted Page Printer Set, for example; re-location of control parts to meet varying installation requirements as in the Multiple KSR and RO Set where the control parts are mounted in a compartment at the rear of the fan.

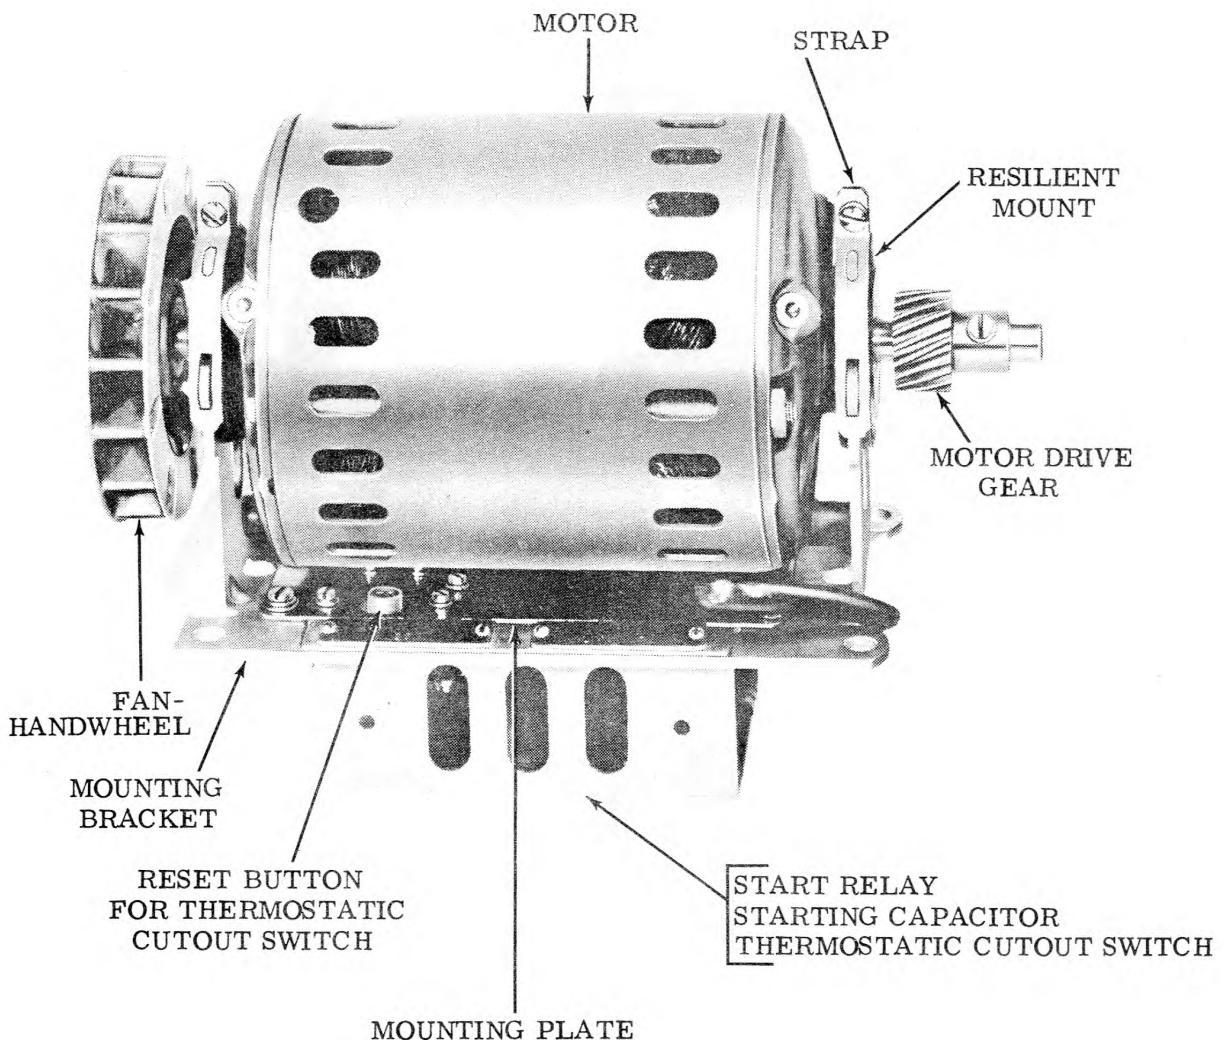

Figure 2 - Typical Standard or Heavy Duty Synchronous Motor Unit

#### SERIES (GOVERNED) MOTOR UNITS (Fig. 3)

**2.06** The series (governed) motor units typically consist of a motor, speed regulator (governor), protective and control devices, and a mounting. Variations of this type are described below.

##### A. 1/20 Horsepower Motor Units (AC/DC)

**2.07** The 1/20 hp series (governed) motor unit consists of a series type motor, speed

governor, motor mounting bracket, and a housing for the governor resistors and spark suppression capacitor. The governor is mounted on an extension of the armature shaft and includes a fan that circulates air through the motor. The opposite end of the shaft contains a tapped hole for mounting the driving gear. Targets for speed checking purposes are provided on the governor cover. The motor is mounted by means of resilient mounts at each end shield that are fastened to the mounting bracket by straps.

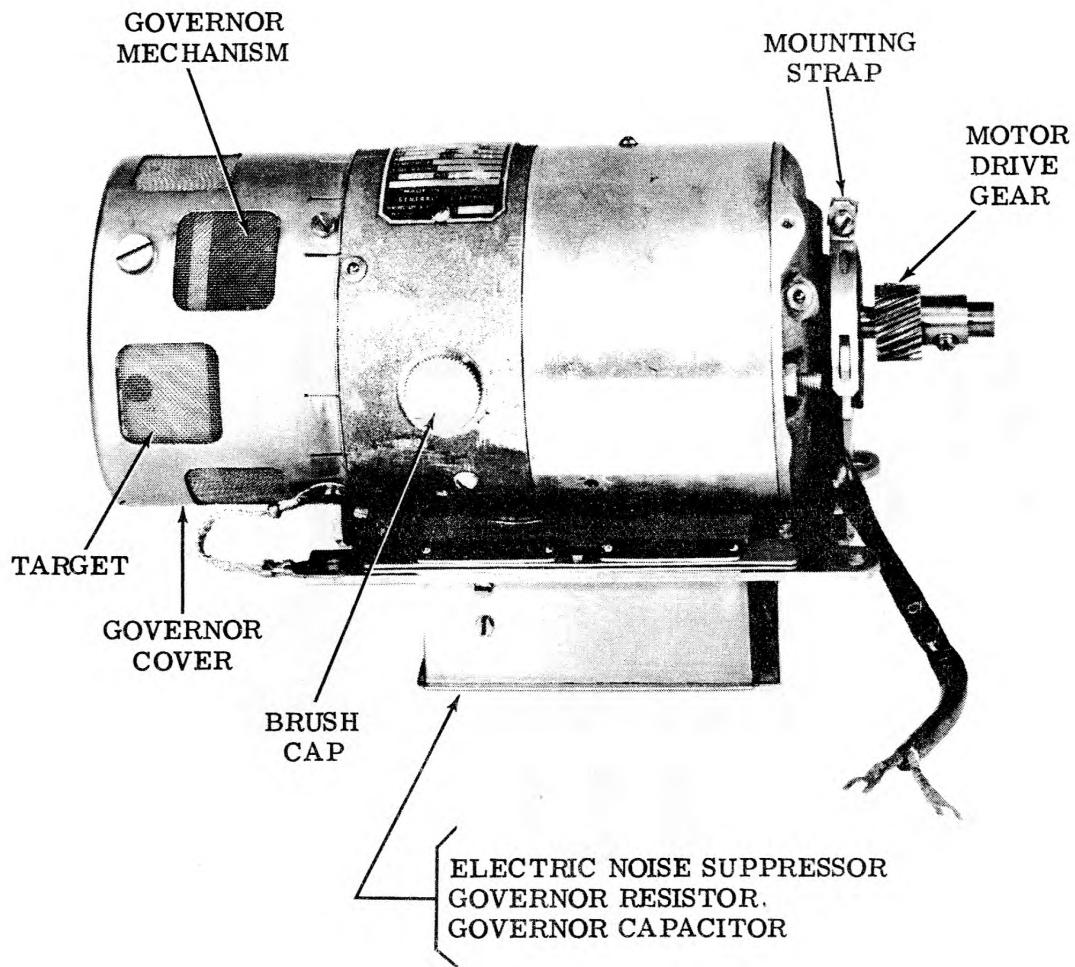

Figure 3 - Typical Series (Governed) Motor Unit

**2.08** A variation of the motor unit described in 2.07 is available with electrostatic shielding and radio frequency noise suppression.

#### B. 1/15 Horsepower Motor Units (AC/DC)

**2.09** These motor units are similar to the units described in 2.07, but are equipped with electrostatic shielding and radio frequency

noise suppression. The higher horsepower rating accommodates, for example, the requirements of the Automatic Send-Receive Set.

#### C. 1/15 Horsepower Motor Units (DC)

**2.10** These motor units are designed to operate with 48 volts dc only and are equipped with electrostatic shielding and radio frequency noise suppression.

TABLE 1. TECHNICAL CHARACTERISTICS OF MINIATURE SYNCHRONOUS MOTOR UNITS

CHARACTERISTICS	LMU19, LMU20, LMU24, LMU26, LMU31, LMU45, MU43 (Bell 28F)	LMU35, LMU40
Rated Horsepower	25 Millihorsepower	25 Millihorsepower
Input Voltage	115 $\pm$ 10% AC	115 $\pm$ 10% AC
Phase	Single	Single
Frequency	60 Cycles, $\pm$ 0.75%	50 Cycles, $\pm$ 1%
Input Current (Full Load - Amperes)		
Starting	4.0-5.0	3.0
Running	1.25	0.47
Power Factor (Full Load)		89%
Watts Input (Full Load)		50
Start Capacitor	88-108UF (130-156UF, MU43 (Bell 28F))	64-77
Run Capacitor	-	7.0
Speed	3600 RPM	3000 RPM
Rotation	Clockwise viewed from pinion end	Clockwise viewed from pinion end
Mounting	Upright	Upright
Other Distinguishing Characteristics	LMU19 - Relay, capacitor, and thermostatic cutout switch mounted on motor bracket.  LMU20, LMU26 - Relay, capaci- tor, and thermostatic cutout switch mounted on motor bracket. LMU20 has single ventilator, LMU26 none.  LMU24 - Twin exhaust ducts. Relay and capacitor mounted on motor bracket. No thermostatic cutout switch. Fused externally. Latest design have double shaft.  LMU31 - Capacitor and thermo- static cutout switch mounted on motor bracket. Relay mounted on bracket assembly.  LMU45, MU43 (Bell 28F) - Relay, thermostatic cutout switch mounted on motor bracket. Capacitor mounted on motor shield. Wiring for external start switch noise suppressor (LMU45 only).	LMU35, LMU40 - Contain no thermostatic cutout device. Fused (0.8A) externally. Relay and capacitors mounted on motor mounting bracket. Equipped with an air shield.

TABLE 2. TECHNICAL CHARACTERISTICS OF STANDARD AND HEAVY DUTY SYNCHRONOUS MOTOR UNITS

CHARACTERISTICS	LMU3 (Bell 28A), LMU15 (Bell 35A), LMU21 (Bell 28LA), LMU30, LMU37, LMU42, LMU46	LMU33, LMU36, LMU38, LMU51, LMU52	LMU11, LMU12 (Bell 28C), YMU-1	LMU50
Rated Horsepower	1/20	1/20	1/12	1/12
Input Voltage	115 $\pm$ 10%, AC	115 $\pm$ 10%, AC	115 $\pm$ 10%, AC	115 $\pm$ 10%, AC

### 3. PRINCIPLES OF OPERATION

#### SYNCHRONOUS MOTOR UNITS (Figs. 1, 2, and 4)

**3.01** The following description of operation applies to the miniaturized, standard, and heavy duty synchronous motor units.

**3.02** The stator of the synchronous motor has two windings: a starting winding and an operating (or run) winding. The starting winding, starting capacitor and the normally-open contacts of the starting relay are connected in series. The coil of the current-operated starting relay is connected in series with the operating winding. When power is applied, the initial current through the operating winding (and also the starting relay coil) energizes the relay, and its contacts close the circuit to the starting

winding. As the speed of the rotor increases, the current in the operating winding decreases and, when the current has decreased to a predetermined magnitude, the starting relay de-energizes. Its contacts open and remove the starting winding from the operating circuit. The rotor continues to accelerate until it reaches the synchronous operating speed. Rotation is in the counterclockwise direction, as viewed from the fan or short-shaft end of the motor.

**3.03** The thermostatic cutout switch is connected in series with both stator windings. This temperature operated device opens the circuit to these windings whenever excessive current is drawn, such as may occur if the motor is stalled, thereby preventing overheating and damage to the motor and control parts. The switch may be reset after the unit has cooled by depressing a pushbutton.

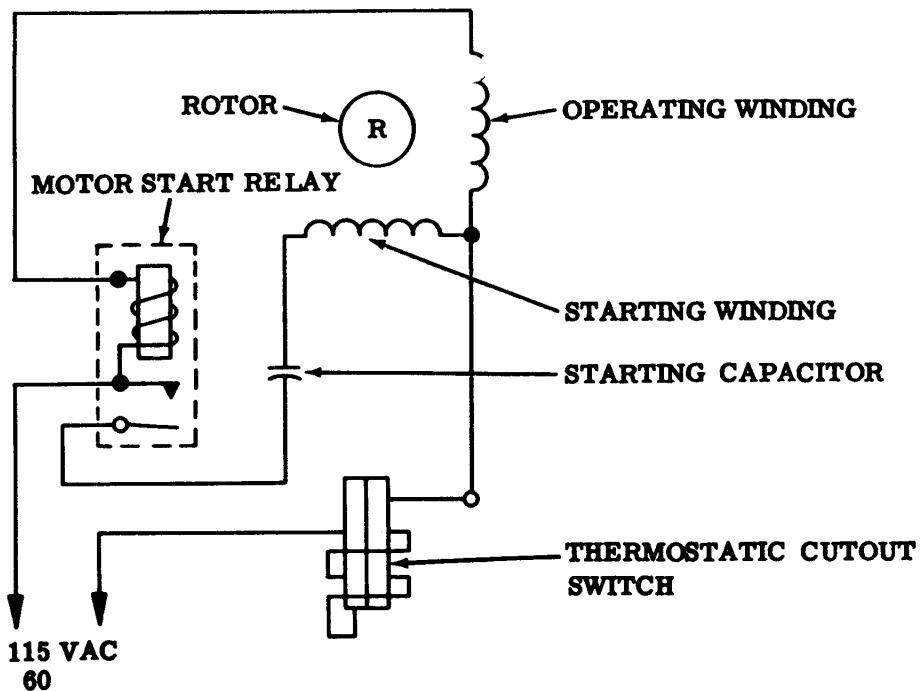

Figure 4 - Typical Synchronous Motor Unit Schematic Diagram

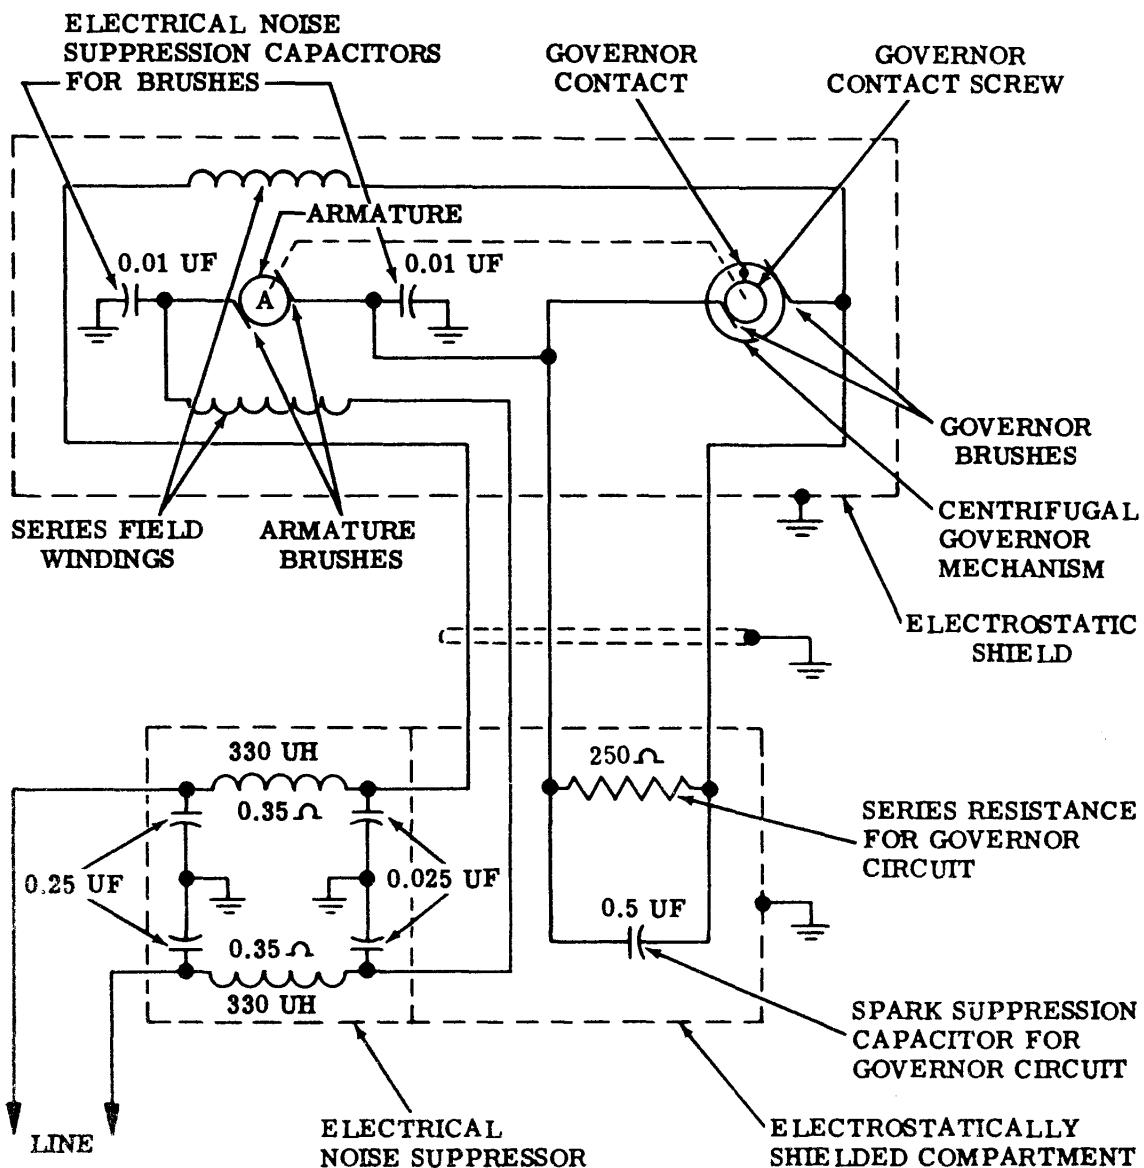

Figure 5 - Typical Series (Governed) Motor Unit Schematic Diagram

## SERIES (GOVERNED) MOTOR UNITS (Figs. 3 and 5)

**3.04** The following description of operation is applicable to all series (governed) motor units.

**3.05** The series wound motor utilizes an electro-mechanical governor for speed regulation. The governor regulates the speed at 3600 rpm,  $\pm 1$  percent, by alternately increasing and decreasing the current in the series connected field windings and armature, which are also in series with a governor contact. A

resistor (high-wattage) and capacitor are connected in parallel with the governor contact. The contact is held closed under the tension of a spring which is adjusted to maintain this condition during speeds up to a predetermined rate. With the contact closed, the resistors are shorted out. When the speed of the motor exceeds the predetermined rate, the centrifugal force acting upon the contact momentarily overcomes the spring tension and the contact is opened. This removes the short from the resistors and they then appear in series with the field windings and armature, reducing their current, and consequently reducing the speed of the motor.

3.06 The tension on the contact spring is adjustable to maintain the motor speed at 3600 rpm. To make this adjustment, a target is provided to compare the motor speed with a standard. The outside surface of the governor cover is finished in white with three rows of black spots equally spaced about its periphery. The outer, center, and inner rows contain four, six, and thirty-five spots, respectively. The

four spot row is a target which should remain essentially stable at 3600 rpm, when viewed through the moving shutter of a 120 vibrations per-second tuning fork. The six spot and thirty-five spot rows serve as targets when using an 87.6 vibration-per-second tuning fork. The six spot row is used to approach an on-speed setting and the thirty-five spot row is used to arrive at an accurate setting of 3600 rpm.

## 2. MINIATURIZED SYNCHRONOUS MOTOR UNITS

## 2.01 Motor Positioning

(A) MOTOR POSITIONING

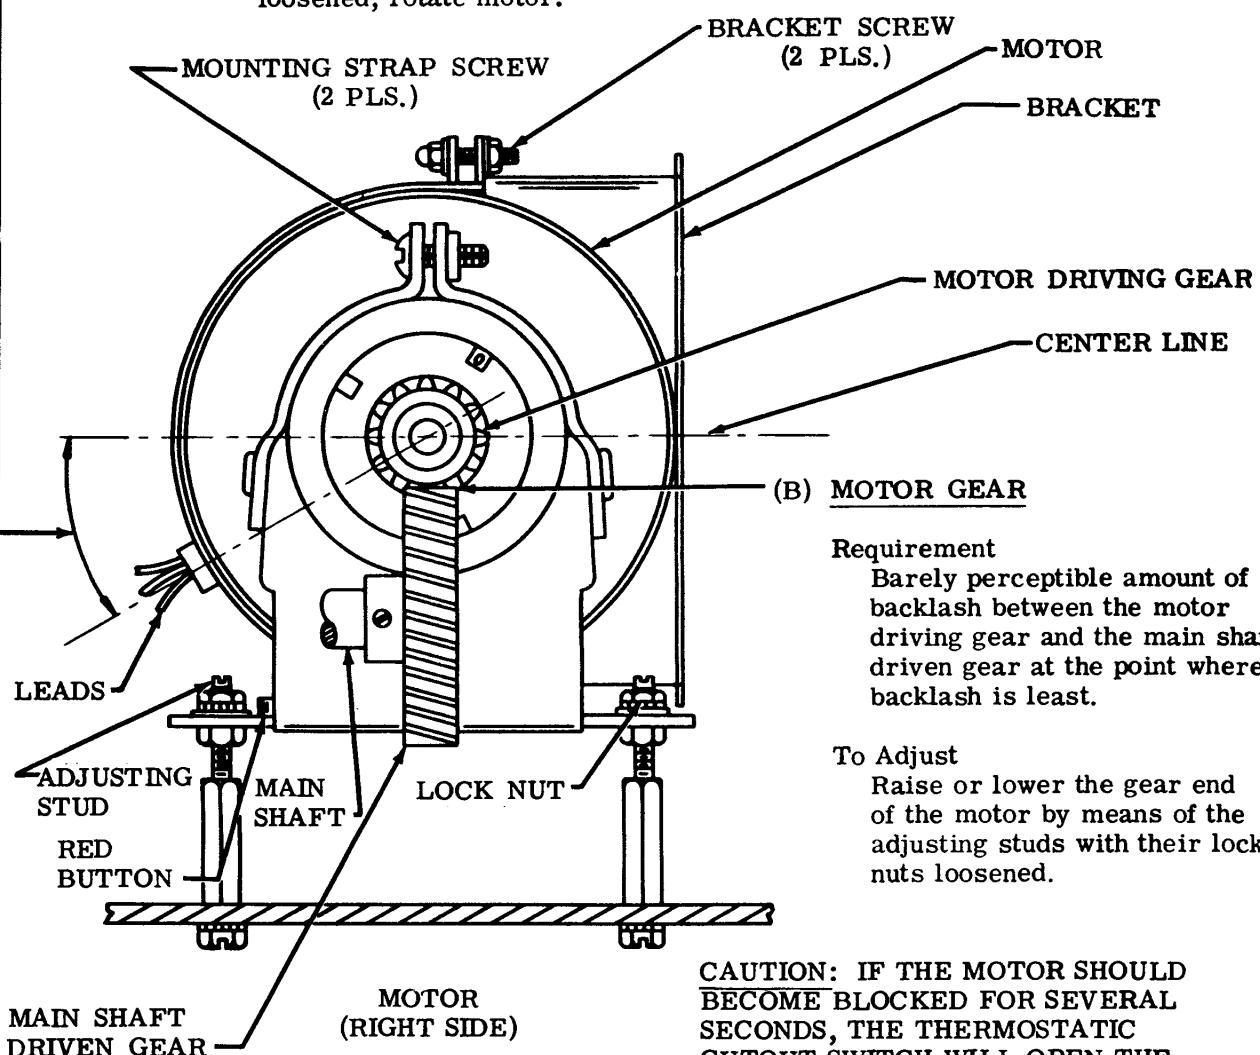

## Requirement

Position motor so that leads are approx  $30^{\circ}$  from center line with oil holes up.

## To Adjust

With mounting strap screws loosened, rotate motor.

Note: If necessary, position bracket with bracket screws loosened.

(B) MOTOR GEAR

## Requirement

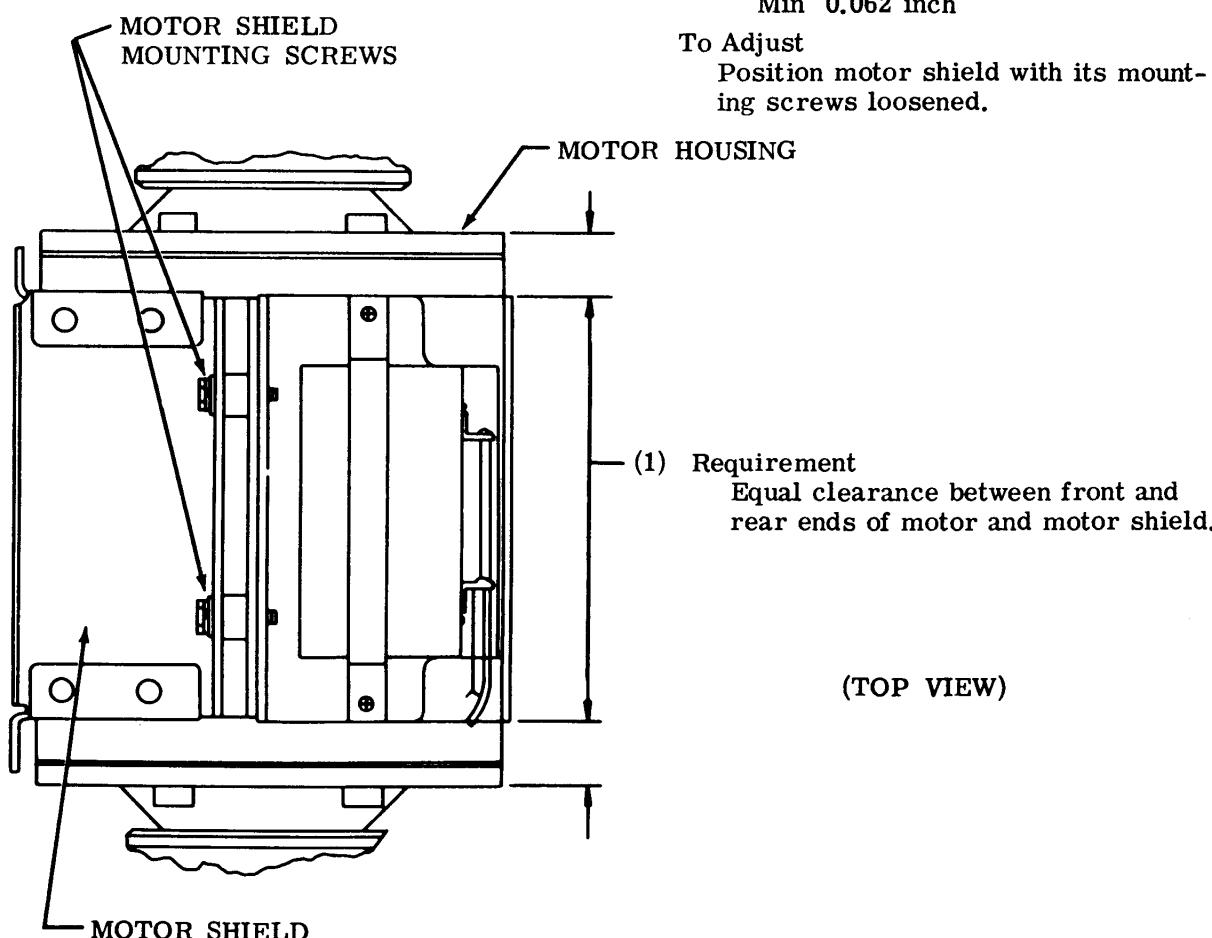

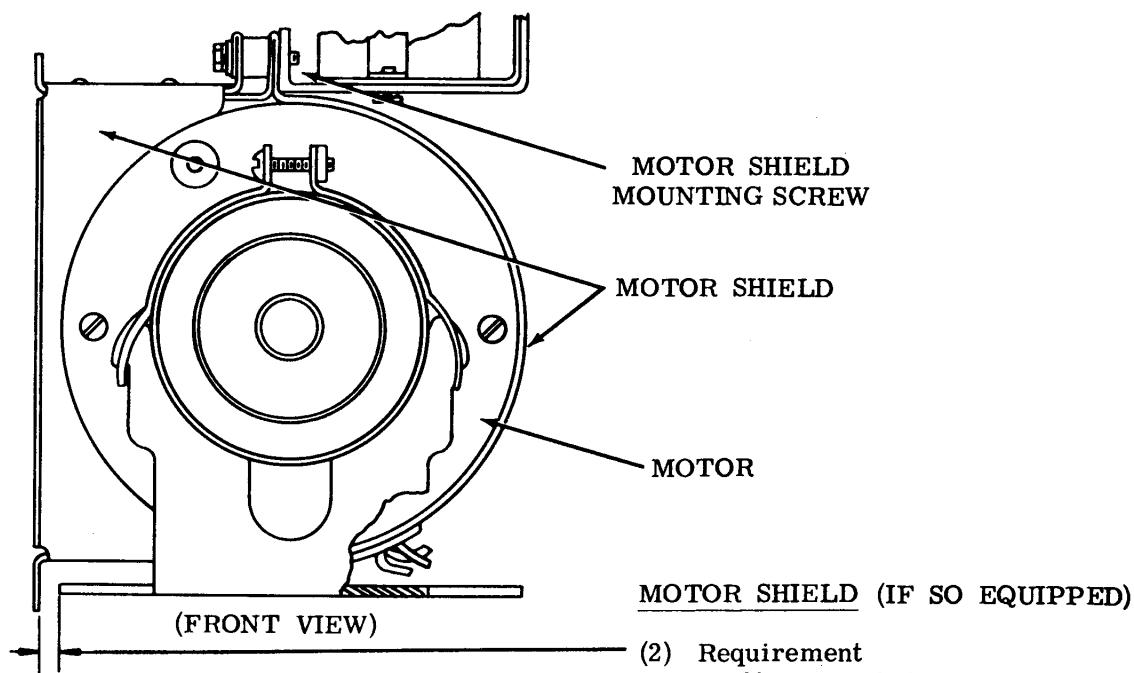

Barely perceptible amount of backlash between the motor driving gear and the main shaft driven gear at the point where backlash is least.

## To Adjust

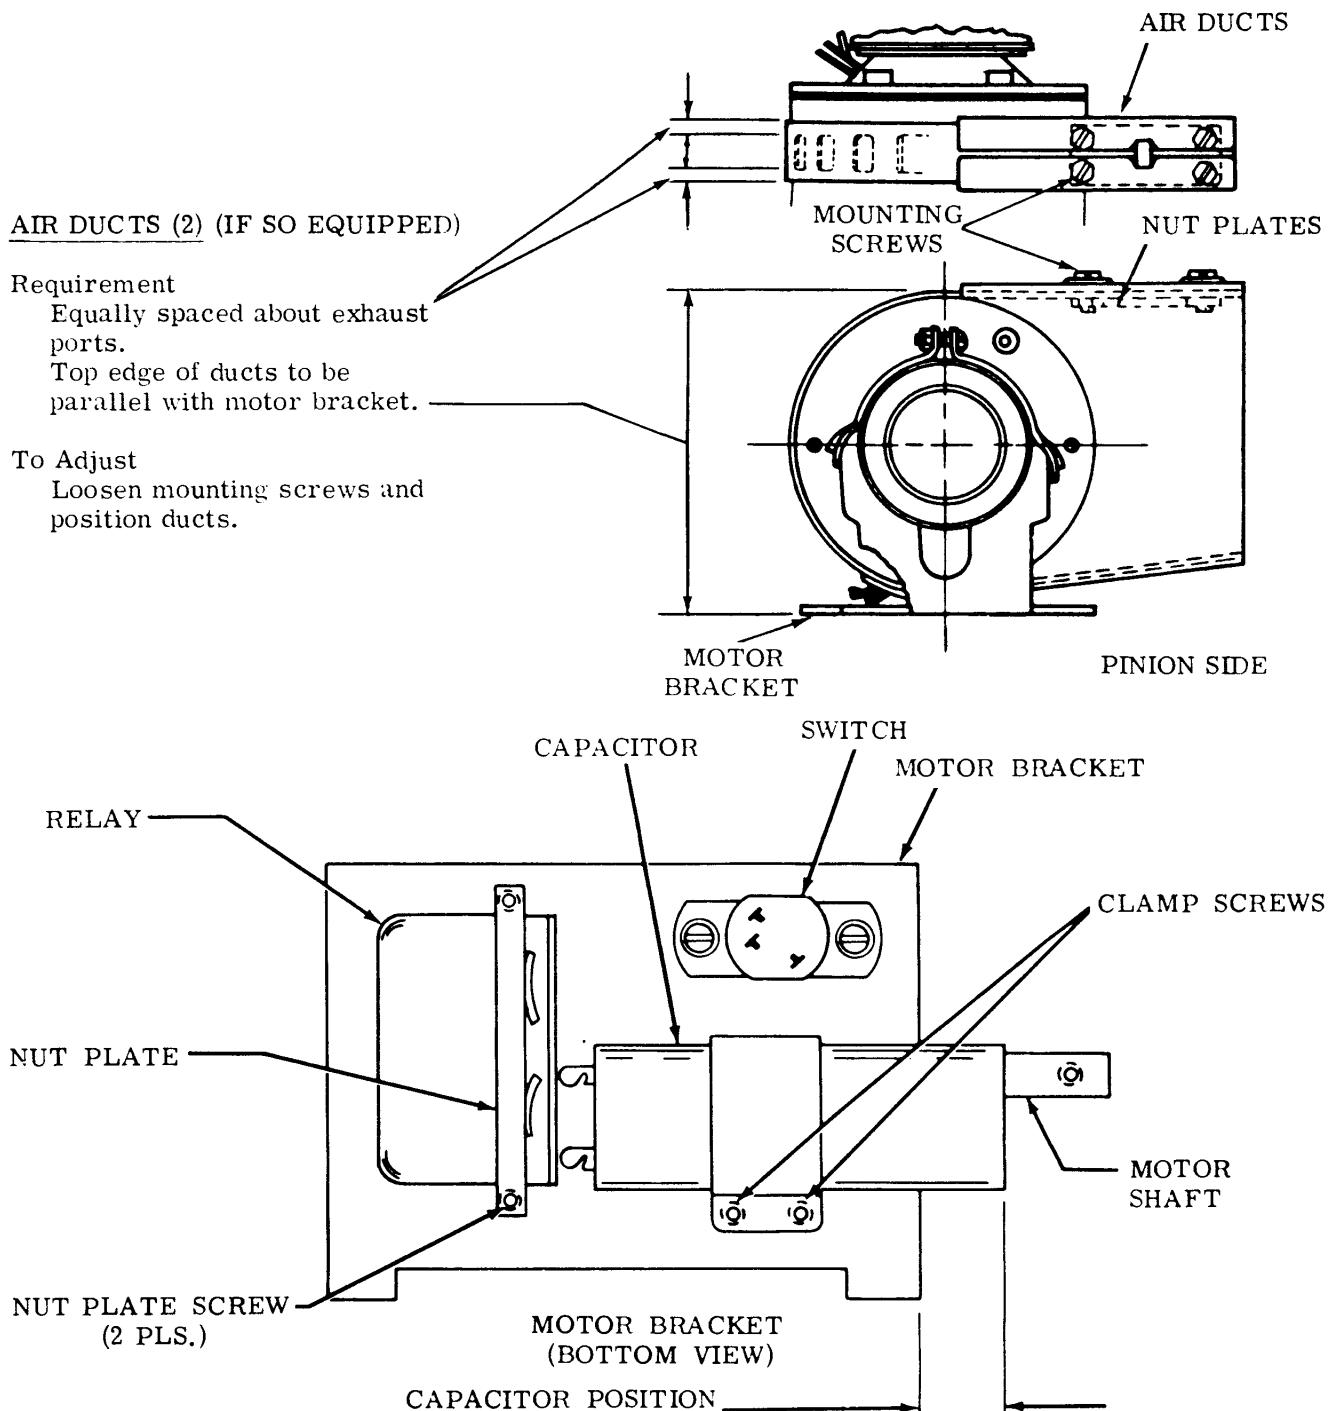

Raise or lower the gear end of the motor by means of the adjusting studs with their lock nuts loosened.

**CAUTION: IF THE MOTOR SHOULD BECOME BLOCKED FOR SEVERAL SECONDS, THE THERMOSTATIC CUTOUT SWITCH WILL OPEN THE CIRCUIT. SHOULD THIS HAPPEN, ALLOW MOTOR TO COOL AT LEAST 5 MINUTES BEFORE MANUALLY RESETTING THE SWITCH BY DEPRESSING THE RED BUTTON. AVOID REPEATED RESETTING.**

## 2.02 Motor Shield

## 2.03 Air Ducts and Capacitor Position

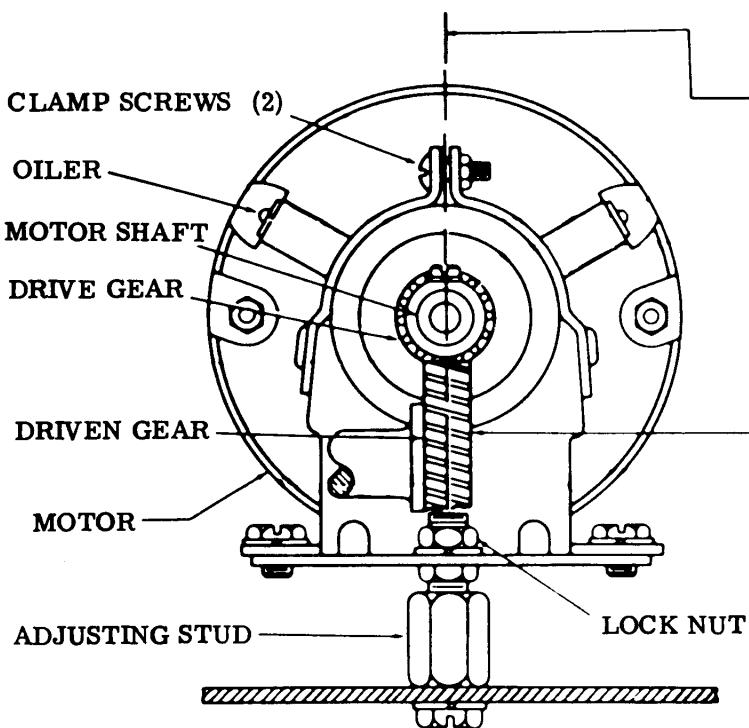

Requirement  
Max 1 2 inch between motor bracket and end of capacitor.

To Adjust  
Position relay and capacitor with motor removed from motor bracket and nut plate and clamp screws loosened.

## 3. STANDARD AND HEAVY DUTY SYNCHRONOUS MOTOR UNITS

## 3.01 Motor Positioning

**MOTOR POSITIONING**

(1) Requirement (Upright Mounted Motors)  
Oilers should be upward and approximately equidistant from a vertical line through motor shaft.

(2) Requirement (Inverted Mounted Motors)  
Oilers should be downward and approximately equidistant from a vertical line through motor shaft.

To Adjust  
Position motor with clamp screws (2) loosened.

**MOTOR ADJUSTING STUD (IF SO EQUIPPED)**

Requirement  
Barely perceptible backlash between drive gear and driven gear at point where backlash is least.

To Adjust  
With lock nut loosened, position adjusting stud. Tighten nut while holding stud in position.

**CAUTION: IF MOTOR BECOMES BLOCKED FOR SEVERAL SECONDS, THERMOSTATIC CUTOUT SWITCH (ON UNITS SO EQUIPPED) WILL BREAK CIRCUIT. SHOULD THIS HAPPEN, ALLOW MOTOR TO COOL AT LEAST 5 MINUTES BEFORE DEPRESSING RED RESET BUTTON. AVOID REPEATED RESETTING.**

4. SERIES GOVERNED MOTOR UNITS

4.01 Motor Positioning and Governor

MOTOR POSITIONING (NOT ILLUSTRATED)

**Requirement**

Motor should be centrally positioned in its rubber mounts so as to provide at least 0.020 clearance between the motor housing and the cradle at the governor end. The cable should also clear the grommet in the screen by at least 0.030 inch.

(A) GOVERNOR CONTACT BACKSTOP

**Requirement**

Clearance between the movable contact arm and its eccentric backstop.

Min 0.020 inch---Max 0.040 inch

**To Adjust**

Rotate the eccentric backstop with clamping screw loosened.

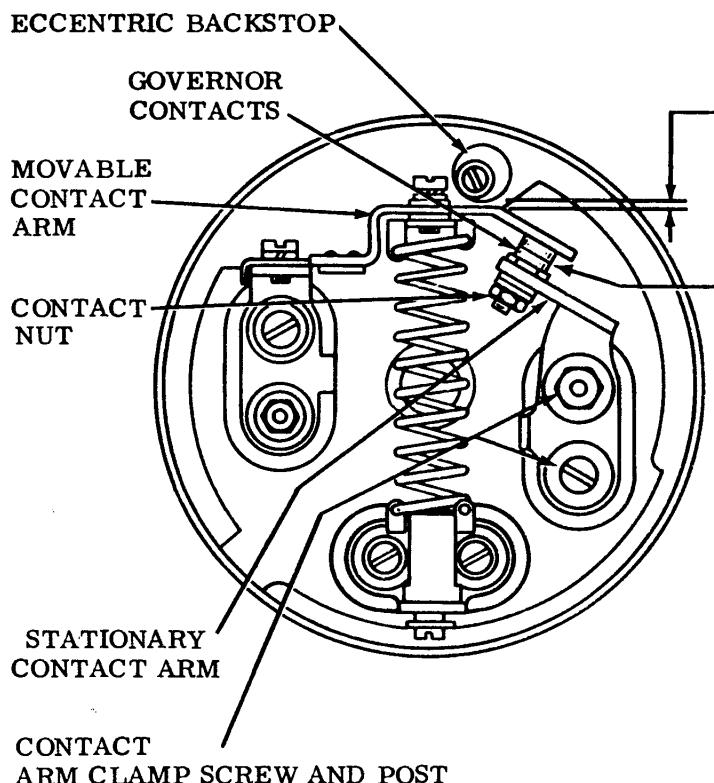

(B) GOVERNOR CONTACT

**Requirement**

The contacts should meet squarely and not overlap more than 0.010 inch.

**To Adjust**

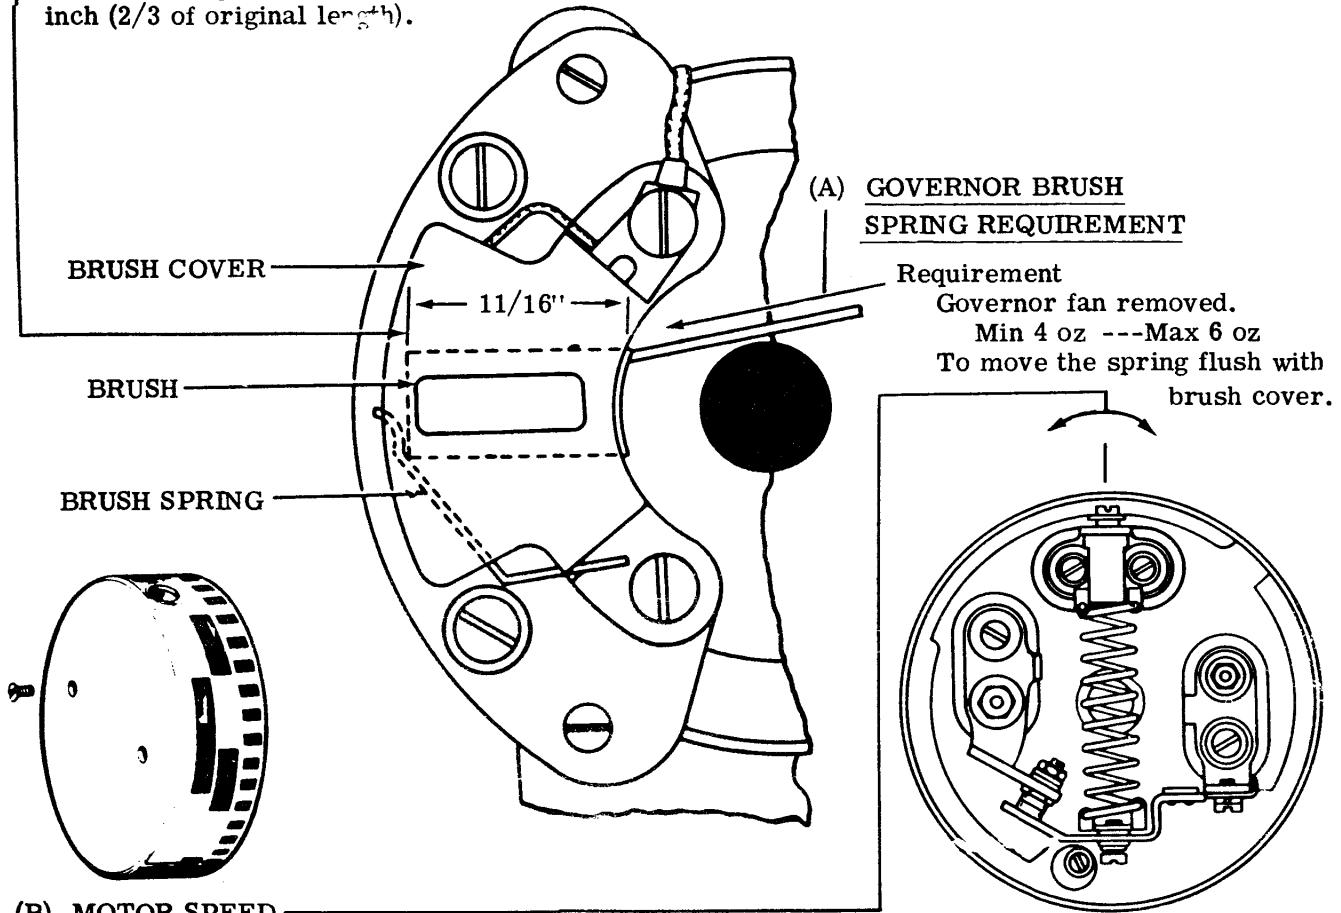

Position the stationary contact and contact arm with the clamp screw and post loosened.

**CAUTION: EXCESSIVE PRESSURE  
AGAINST GOVERNOR COVER  
ASSEMBLY DURING REMOVAL  
MAY DAMAGE SCREENED WINDOW.**

## 4.02 Motor Governor

**Note:** Replace governor brushes that have worn to a length of approximately  $15/32$  inch ( $2/3$  of original length).

**Requirement**

With target illuminated and viewed through the vibrating shutters of a 120 vps turning fork the spots on the 4-spot target should appear stationary while rotating. With target illuminated and viewed through the vibrating shutters of an 87.6 vps tuning fork the spots on the 6-spot target should appear stationary while rotating and with speed slightly increased the spots on the 35 spot target should appear stationary.

**To Adjust**

Stop the motor and turn the adjusting screw as indicated on governor cover. For units with screened governor covers, stop the motor, remove the TP152035 plug from cover. Turn adjusting screw as indicated on periphery of target.

**Note:** It is possible to adjust the motor at some multiple of the correct speed. To check motor speed when used with a page printer, return typebox carriage to left margin, set up any character in selector and manually trip typebox clutch trip lever. Printing should occur as follows:

WPM	PRINTED CHARACTERS	REQUIRED TIME
60	70	10 seconds
75	44	5 seconds
100	57	5 seconds

## MOTOR UNITS

### LUBRICATION

CONTENTS	PAGE
1. GENERAL .....	1
2. LUBRICATION .....	2
Motor bearings - standard motors...	2
Motor bearings - miniature motors .	2

#### 1. GENERAL

1.01 This section has been revised to include additional information for lubricating miniature synchronous motors. Since this issue is a general revision, marginal arrows that indicate changes have been omitted.

1.02 For complete lubrication instructions refer also to the section covering teletypewriter apparatus general lubrication.

1.03 The motor should be lubricated initially, before being placed in service, as specified in the section covering the preparation of teletypewriter apparatus for installation. In the case of a new motor, the information supplied with it pertaining to the amount of lubricant should be used as a guide for further lubrication.

1.04 The suggested lubrication interval is indicated in the chart. However, because of varying conditions of application, the motor should be lubricated as often as specified by local instructions.

1.05 Before lubricating the motor, carefully and thoroughly clean the outer surfaces of the ball oilers with a clean cloth (KS2423)

dampened with petroleum spirits (KS7860). Avoid depressing the ball oilers so that grit, dirty grease, or contaminated petroleum spirits do not get into the motor bearings (Par. 2.01).

1.06 Whenever the motor is disassembled the bearings should be repacked with Beacon 325 grease or equivalent.

1.07 The exposed motor shaft should be covered with a thin film of grease to prevent rust.

1.08 Use KS7470 oil where oil is specified.

1.09 The miniature synchronous motor does not contain ball oilers, as in the larger type motors, but has only a single oil hole in each end shield as shown in Par. 2.02.

**CAUTION: DO NOT USE GREASE GUN ON  
28, 32, 33 & 37 MOTOR UNITS.**

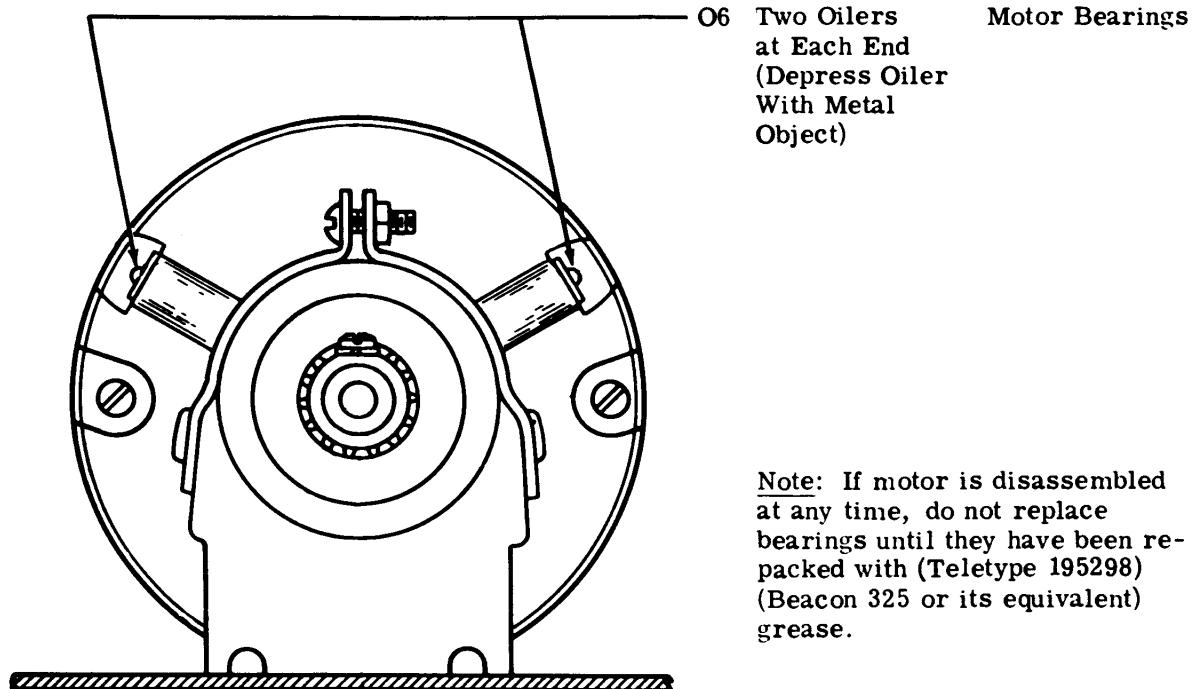

#### LUBRICATION INTERVAL

Motor Unit	Interval
Standard and heavy duty units	1500 consecutive operating hours or 6 months, whichever occurs first
Miniature units	750 consecutive operating hours or 3 months, whichever occurs first.

2. LUBRICATION

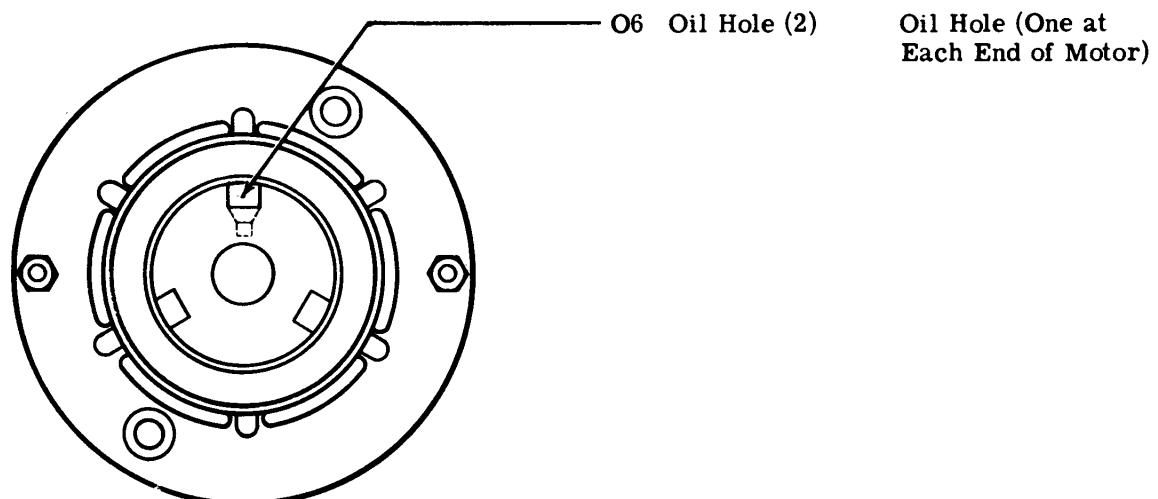

2.01 Motor Bearings - Standard Motors

Lubrication of motor bearings with ball type oilers.

Note: If motor is disassembled  
at any time, do not replace  
bearings until they have been re-  
packed with (Teletype 195298)  
(Beacon 325 or its equivalent)  
grease.

161580	Resistor, 500 Ohm 15, 20, 21	174556	Cable w/Terminals 26	306708	Modification Kit 27
161984	Motor, AC Synchronous 3, 10	175198	Modification Kit 1, 26		
162072	Capacitor, 88 to 108 MFD 3, 11, 12	176064	Plate, Nut 12		
162196	Insulator 3, 11	176111	Duct 12		
		176137	Jumper, 9-1/4" Black 3		
		176947	Plate w/Pads 3, 9		

## NUMERICAL INDEX (Continued)

Part Number	Description and Page Number	Part Number	Description and Page Number	Part Number	Description and Page Number
306709	Modification Kit 27	310341	Insulator 3, 9	312979	Bracket w/Cradle, Motor 3, 14
307281	Switch, Thermostatic 3, 6	312530	Washer, Textolite 22, 27, 28	320269	Switch, Thermostatic 3, 5
309431	Plate, Code 27	312531	Washer, Fiber 22, 27, 28	320270	Capacitor, 15 to 18 MFD 3, 5
309432	Plate, Code 27, 28	312573	Jumper, 6" Red 3, 6	320271	Relay, Motor Starting 3, 5
309433	Plate, Code 27	312574	Jumper, 6" Black 3, 6	320272	Stator 4
310295	Motor, Synchronous 3, 10	312971	Shield 14	330564	Rotor 10
		312977	Insulator 3, 14	330565	Rotor 10
